Cornerstone Systems, Inc. is pleased to introduce AutoPlan. A breakthrough in part planning for finishing companies that do NADCAP / ISO parts. AutoPlan is a sophisticated planning engine that automates the task of part planning. All you do is pick a specification, material, material condition, and other part characteristics. Then AutoPlan will automatically generate a complete set of process instructions.

AutoPlan will revolutionize how NADCAP / ISO part planning is done and only Visual Shop has it.

Stop by our table to see what AutoPlan can do for you.

CONTACT: SUSAN LOFGREN

Fischer Technology is a U.S. manufacturer of handheld and benchtop coating thickness measurement, material analysis, and materials testing instrumentation. Fischer has a wide range of instruments for measuring paint and electroplated coatings applied to magnetic and non-magnetic materials.

The FMP series of handheld coating thickness gauges are ideally suited for measurements of paint, powder coating, plating and anodize. The PHASCOPE® PMP10 uses the phase-sensitive eddy current test method to non-destructively measure metallic coatings on ferrous or non-ferrous substrates. It is particularly well suited for measuring thickness of nickel on steel. The COULOSCOPE® CMS STEP instrument enables measurements not only of the thicknesses of copper carrier coatings, nickel multi-coatings and chromium coatings, but also of the electrochemical potential differences between the nickel coatings without problems. Other measurement methods available for Fischer include beta backscatter, magnetic induction, eddy current, and coulometric. Fischer also offers solutions for measurement of micro-hardness, conductivity, ferrite content and porosity testing.

For more than 75 years, MacDermid Industrial Solutions has provided technology-based solutions to the surface coating industry. Our special formulations of chemical based products are used for decorating and protecting metals and plastics in such applications as chrome plating of alloy wheels, high performance fasteners and electroless coating of computer disc drives. Our customers are mainly coating applicators, found in all industrial manufacturing regions.

We help our customers by developing solutions which solve problems, such as meeting new environmental regulations, and providing unique, evolutionary improvements for their finished products. "Yes We Can" reflects our spirit for developing products that fulfill customer needs and by sharing value-added, application know-how with our customers and end users.

The South Coast Air Quality Management District (SCAQMD) has the primary responsibility for control of air pollution from all sources, other than emissions from motor vehicles. The SCAQMD adopts rules and regulations that carry out the plan and are not in conflict with state law and federal laws and rules and regulations (including Rule 1469 Hexavalent Chromium Emissions from chromium electroplating AND chromic acid anodizing operation.) 1.) Require the use of best retrofit available control technology (BACT) for new and modified sources and the use of BACT for existing sources 2.) Promote cleaner burning alternative fuels 3.) Provide for indirect source controls in those areas of south coast district in which there are high-level, localized concentrations of pollutants or with respect to any new source that will have a significant effect on air quality in the South Coast Air Basin.

UIC will introduce our CL-NC Alkaline Copper—this non-cyanide process is designed to eliminate the need for zincating on aluminum (and aluminum alloys with less than 1% silicon). CL-NC can also replace cyanide copper strikes used prior to zinc die cast plating. We will also show our ANP EN for plating on aluminum. The ANP EN provides significant cost savings due to getting at least six MTO's PLUS no strikes and no double zincating!

CONTACT: ELIX JORGE

World Resources Company (WRC) specializes in recycling metal-bearing residues, primarily wastewater treatment sludge/filter cake from various industries, including electroplating and metal finishing. WRC has operations in the U.S., Europe and the Pacific Rim and operates two domestic recycling facilities in Phoenix, AZ and Pottsville, PA. The latter two are ISO 14001, 9001 & OHSAS 18001 certified. WRC's recycling processes eliminate a generator's cradle-to-grave liability.
